Explain the concept in your own words

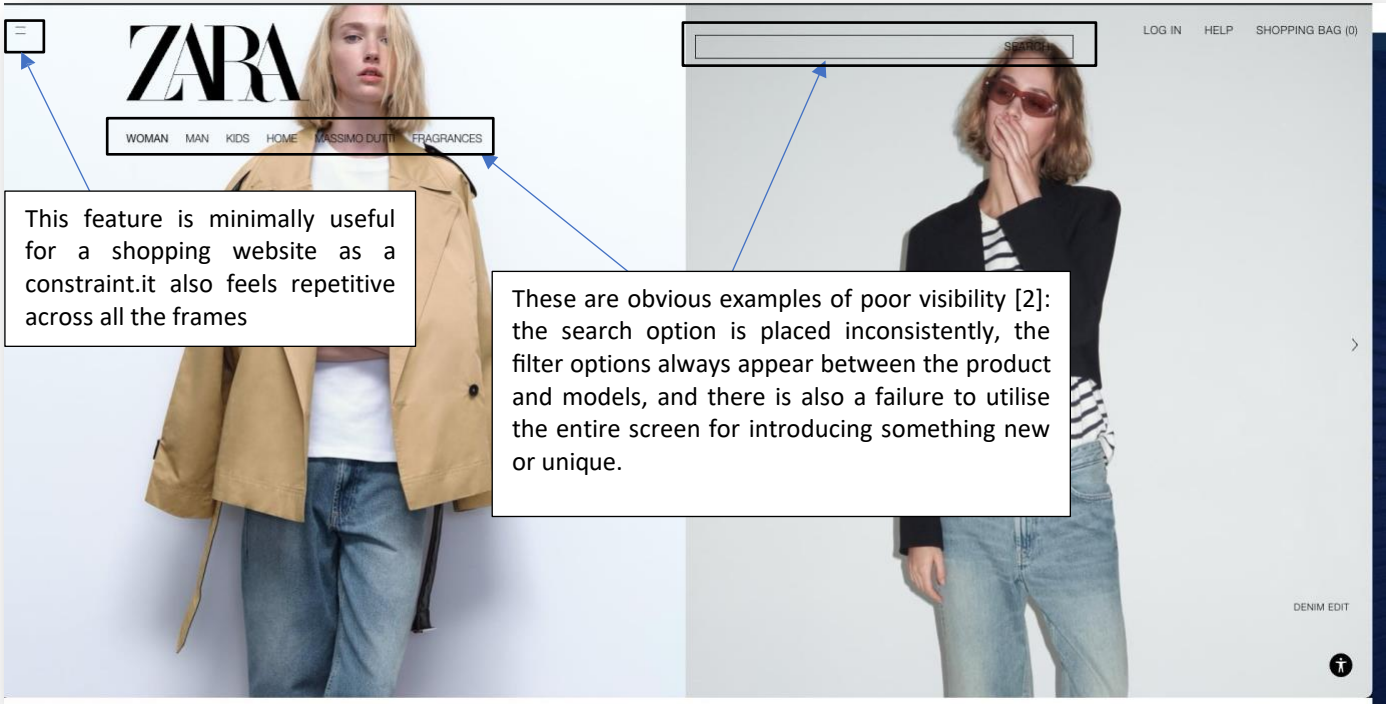

Visibility: Refers to making functions visible to increase the likelihood that users will know what to do next. It emphasizes the importance of providing appropriate cues for users to understand the next steps in their tasks.[1]

Feedback: Involves providing users with information about what action has been done and the result of that action. This principle is about making the outcomes of actions clear to the user, either through visual or auditory means.[1]

Constraints: This principle is about limiting the actions that can be performed at a given moment to prevent errors. By constraining the kinds of interactions possible, it helps guide users towards correct actions and prevents them from making mistakes.[1]

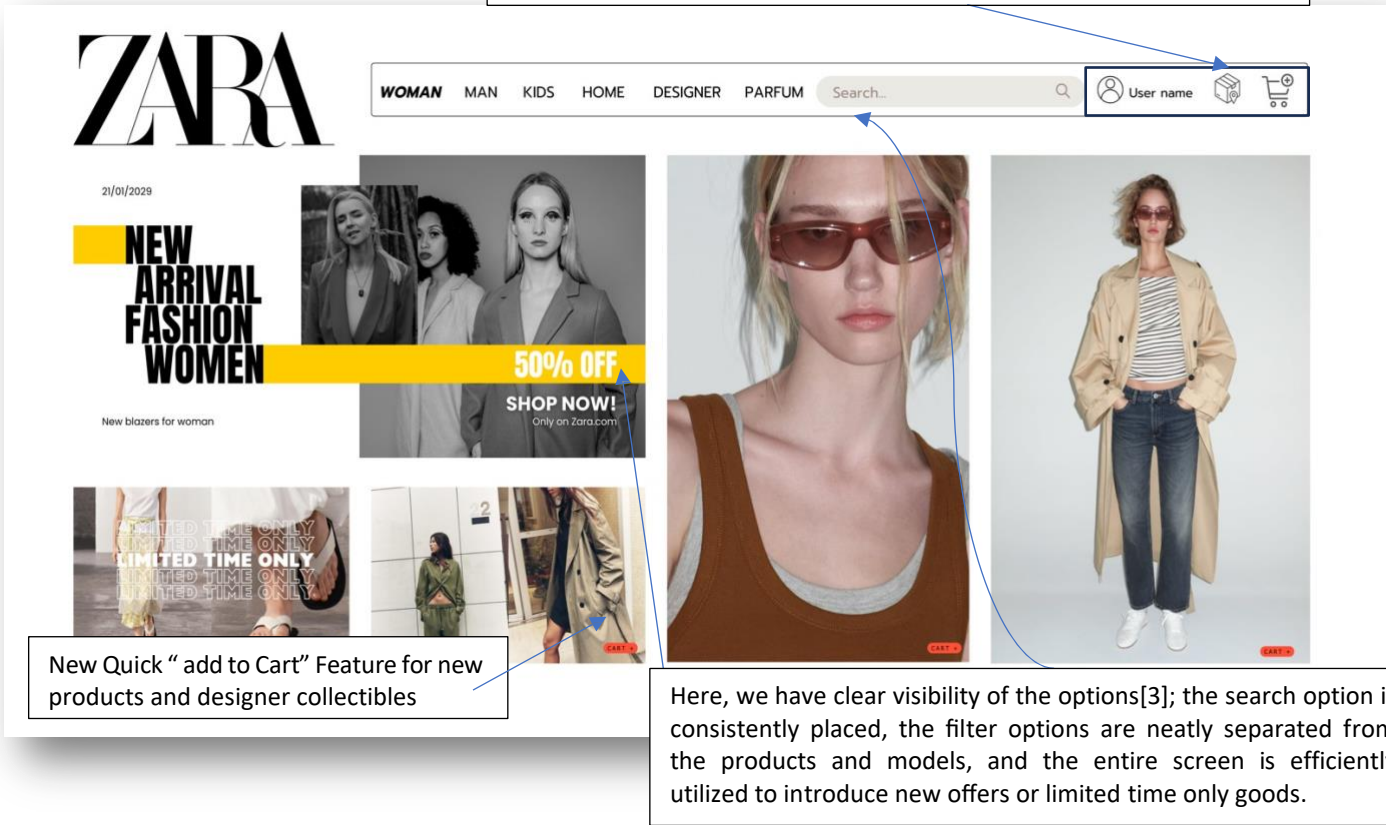

Consistency: Focuses on designing interfaces to have similar operations, behaviors, and elements for similar tasks. Consistency in design allows users to leverage prior knowledge from one part of an application or from other applications, making the interface easier to use and learn.[1]

INITIAL DESIGN OF THE FRONT PAGE [VISIBILITY & CONSTRAINT]

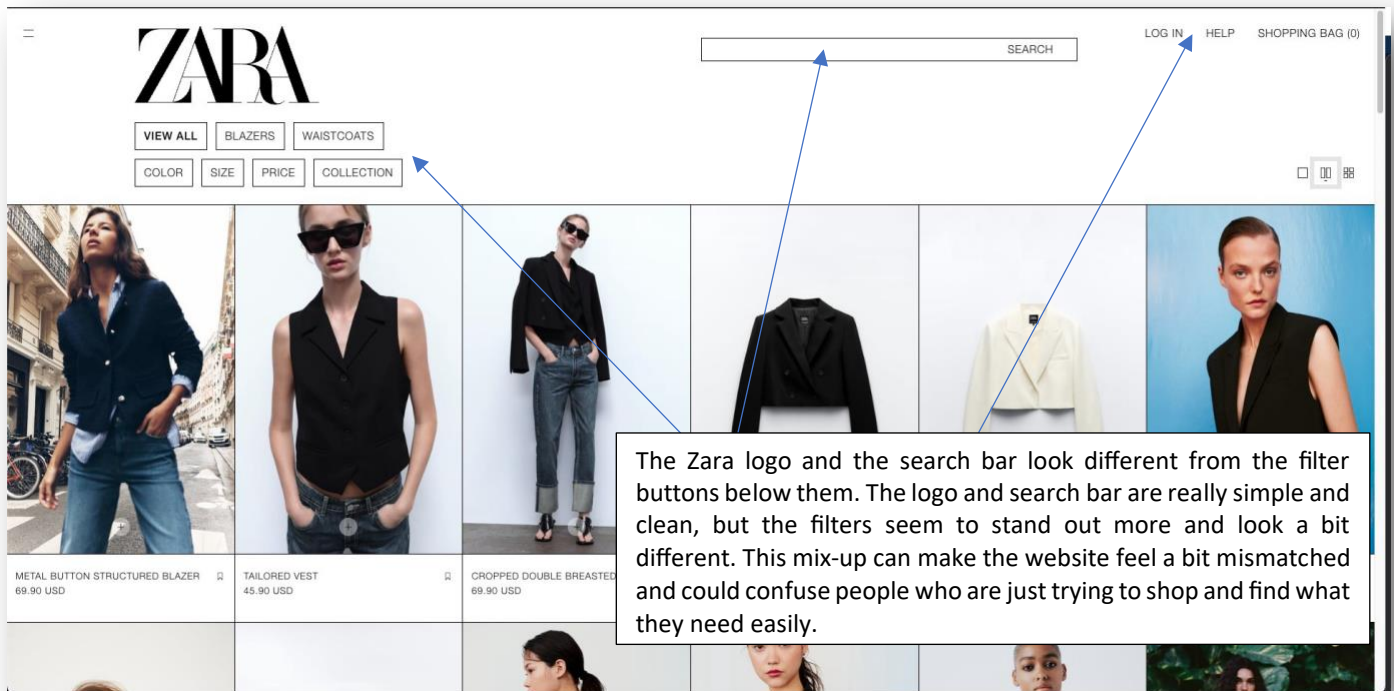

RE-DESIGN OF THE FRONT PAGE

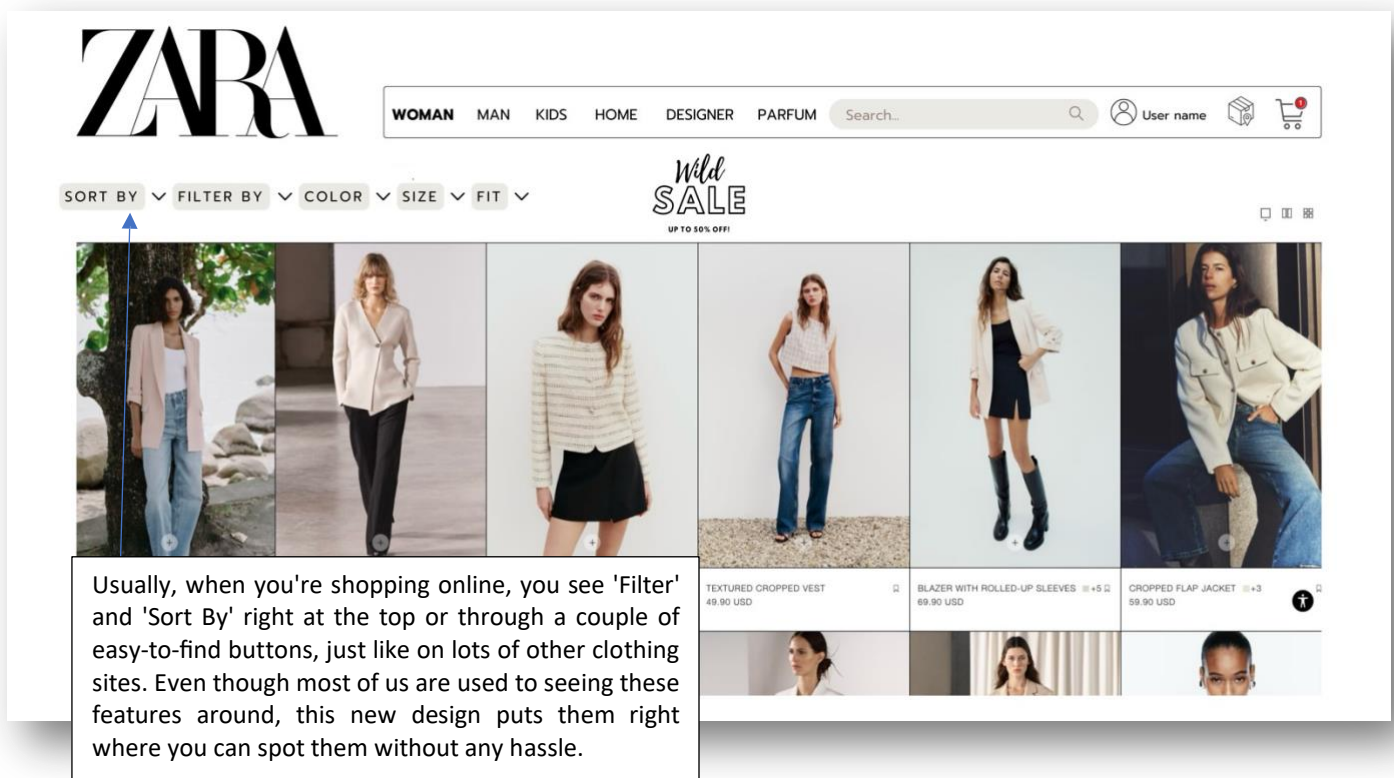

In this section, We have redesigned the shopping bag and login section into an entirely new profile section, along with a quick view button for recent orders placed in the middle of the profile and shopping cart.

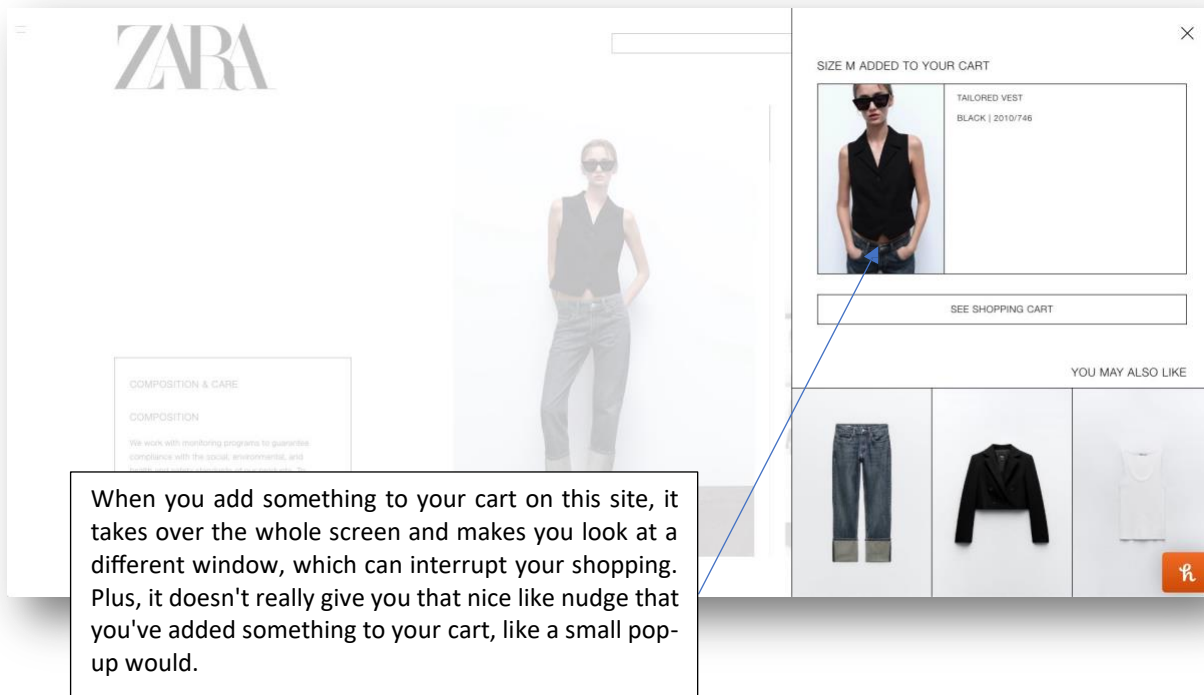

INITIAL DESIGN OF THE SEARCH RESULTS PAGE [CONSISTENCY]

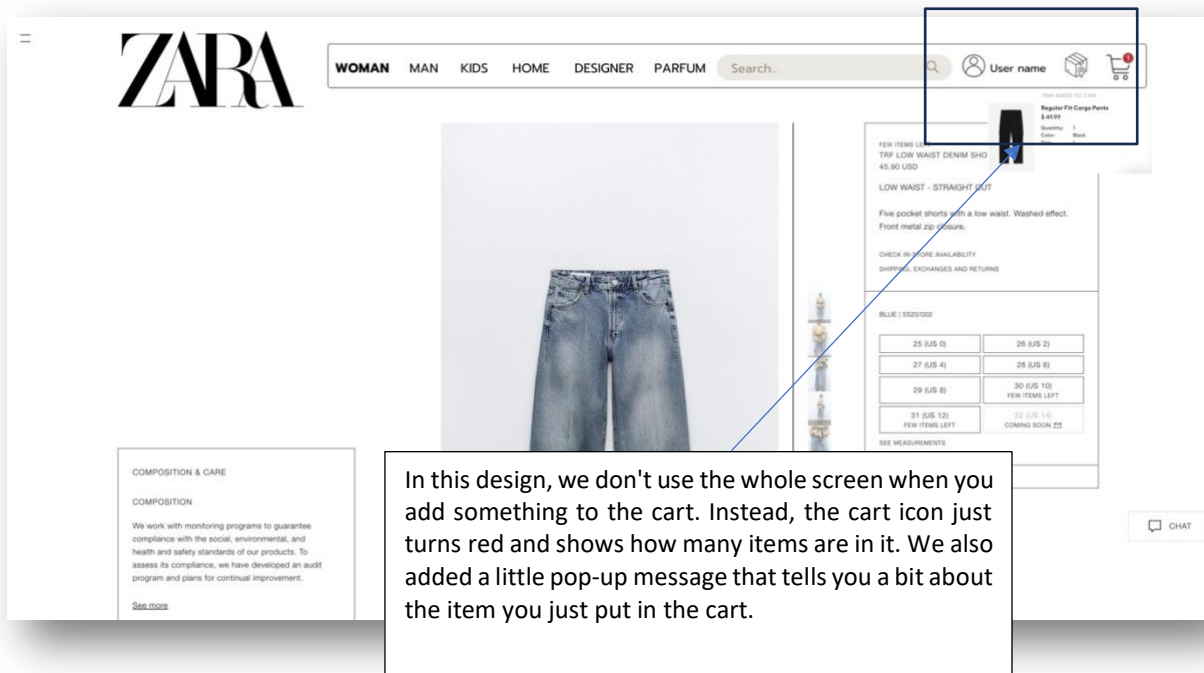

RE- DESIGN OF THE SEARCH RESULTS PAGE [CONSISTENCY]

INITIAL DESIGN WHEN YOU ADD AN ITEM TO CART [FEEDBACK]

RE-DESIGN WHEN YOU ADD AN ITEM TO CART [FEEDBACK]
